PROFESSIONAL SUMMARY

Cloud & DevOps Engineer building AWS infrastructure with Terraform, containerized services and GitHub Actions pipelines. Hands-on experience with local Kubernetes, Linux automation and Azure Blob Storage integration. Developed Minerva Sentinel for infrastructure monitoring, host telemetry, alerting and incident workflows.

TECHNICAL SKILLS

Cloud: AWS: EC2, S3, RDS, ECR, IAM, STS, VPC, CloudFront, Systems Manager; Azure Blob Storage

Containers and Infrastructure as Code: Docker, Docker Compose, Kubernetes, kubectl, Minikube, Kustomize, Terraform

CI/CD and automation: GitHub Actions, Git, GitHub, OpenID Connect (OIDC), Bash, Python

Systems and security: Linux, Ubuntu, networking, Nginx, TLS, IAM roles, security groups, Secrets Manager

Observability and data: Metrics, logs, alerting, health probes, incident workflows, PostgreSQL, SQL

Supporting development: Node.js, Express, REST APIs, React, Vite, Azurite

SELECTED ENGINEERING PROJECTS

Minerva Sentinel | Infrastructure monitoring platform **2026**

Independent project | github.com/Semicrypt/minerva-sentinel

- Built a monitoring platform with a host agent, Node.js/Express API, PostgreSQL and React dashboard to collect infrastructure metrics and logs and track incident acknowledgement, resolution and event history.
- Containerized frontend, backend and database services with Docker Compose; configured GitHub Actions CI/CD using OIDC, ECR and Systems Manager for EC2 delivery, plus S3 publishing and CloudFront cache invalidation.
- Implemented cross-account AWS integration with STS AssumeRole, external IDs, temporary credentials and account identity validation, avoiding storage of customer AWS access keys.
- Created a local Kubernetes deployment with Kustomize, backend Services, a PostgreSQL StatefulSet and persistent storage; configured resource limits and startup, readiness and liveness probes.
- Hardened backend Kubernetes workloads with non-root execution, RuntimeDefault seccomp, dropped capabilities and disabled service-account token mounting.
- Built a PostgreSQL bootstrap Job and transactional initializer with nonempty-schema checks and rollback, supporting Secrets Manager credentials and certificate-validated RDS connections.

SELECTED ENGINEERING PROJECTS CONTINUED

AzureDrop | Azure Blob Storage application **2026**

Independent project | github.com/Semicrypt/azuredrop

- Integrated Azure Blob Storage with PostgreSQL file metadata, expiring read-only SAS download links and orphaned-blob cleanup when metadata persistence fails.
- Configured Docker Compose for the API, PostgreSQL and Azurite with persistent storage; implemented database and blob-container health checks that distinguish healthy and unavailable dependencies.
- Automated database schema setup, API tests, frontend linting and build checks with GitHub Actions on pushes and pull requests.

CloudDrop | AWS file storage and infrastructure **2026**

Independent project | github.com/Semicrypt/clouddrop

- Defined AWS infrastructure in Terraform for EC2 application hosting, VPC networking, private RDS PostgreSQL and S3 storage, with encrypted remote state and state locking.
- Configured database access from the application security group, blocked public S3 access and enabled storage encryption; bound application containers to localhost behind an Nginx HTTPS reverse proxy.
- Automated TLS certificate renewal with Certbot and systemd; configured GitHub Actions database/API tests and frontend checks, with container health probes and TLS-validated database connections.

Iceman | Python DevOps command-line tooling **2026**

Independent project

- Developed a Python CLI with Typer and Rich that turns supported Docker, Kubernetes and Terraform requests into deterministic execution plans with command previews, approval prompts and destructive-action guards.
- Implemented Kubernetes pod, deployment, service and connectivity diagnostics and a Minikube deployment workflow; added tests for plan generation and cancellation before execution.

PROFESSIONAL EXPERIENCE

WHINZET Digital ID Limited **Jan - Oct 2025**

Junior Cloud & Network Engineer | Industrial training placement

- Supported Linux environments, network connectivity troubleshooting and infrastructure support during an industrial training placement.
- Assisted with deployment workflows and documented repeatable technical steps for day-to-day operational support.

EDUCATION AND PROFESSIONAL DEVELOPMENT

BSc Computer Science | Wesley University, Ondo | 2026

TechCrush | Cloud Computing & DevOps | Jul - Sep 2026
Completed; certificate received

TechSphere Academy | DevOps Engineering | Oct 2026 - Jan 2027
Enrolled

CERTIFICATIONS

TechCrush — Cloud Computing
Certificate of Completion · 15-Week Bootcamp Scholarship Programme · October 2026
Credential ID: TEC-8565548F
